Assignment 3 - Milestone #3

Good and bad queries for evaluation:

Iftekhar ahmed
machine learning
deep learning research
computer vision applications
software engineering principles
data science techniques
artificial intelligence ethics
cybersecurity best practices
cloud computing benefits
distributed systems scalability

ndfdfsdfs - gibberish should not return a result
manchester united - unrelated
macihne learning - spelling mistake
machine learning algorithm implementation - too broad
best programming language - too vague
latest deep learning frameworks - may not be covered in dataset
how to code in python to be really good - too instructional and too many words
what is NLP
computer science career guide - too many general words
machine learning in blockchain - potentially rare term combination
open-source AI tools comparison - hard to match exact content

**All bad queries were resolved through refined TF-IDF weighting, better filtering through the removal of stop words
